System Administrator (AWS) (m/f/div)

Company Description

Finoa is the leading digital asset platform for institutional investors and corporations, backed by renowned investors like Coparion, Venture Stars, Signature Ventures and Balderton Capital. Founded by Henrik Gebbing and Christopher May in 2018 and based on a shared aspiration to make institutional interaction with digital assets as simple and secure as possible, Finoa has grown into a truly international company, powered by a diverse team, and serving hundreds of clients globally. If you want to join one of Europe's most exciting FinTech start-ups, be part of this once in a lifetime opportunity, and grow together with our company, then this is your chance to apply.

Job Description

We are looking for a System Administrator with strong AWS, automation, and infrastructure-as-code experience who is eager to learn and help us to grow our next generation digital asset products.

Role Description

- Maintain and grow internal infrastructure in AWS and private cloud.
- Take ownership of defining our infrastructure-as-code and configuration management systems to quickly launch, provision, and configure systems.
- Write scripts, configure reverse proxies, and work with API endpoints to detect and automatically heal unhealthy nodes.
- Participate in on-call rotation to respond to critical system outages.
- Use your excellent troubleshooting skills to look at a problem from different angles and dig into the unknown to offer solutions.
- You are comfortable doing operational work that's not automated in the beginning, but you proactively look for ways to unload the burden through automation and identify the point where efforts on automation stop bringing value.

Requirements

- At least 2 years of experience working as a Systems Administrator, or DevOps Engineer.
- Love for CLI Linux systems (RHEL/CentOS, Debian, Systemd).
- Excitement about writing automation scripts that interact with APIs.
- Ability to program in at least two of the following languages: python, bash, perl, java, C, C++.
- Extensive experience with AWS (ec2 instances, security groups, load balancers, s3).
- Solid experience with terraform.
- Experience with FOSS tools (puppet, ansible, chef, salt, nagios, packer, graylog, etc).
- Excellent communication skills in English with the ability to communicate effectively with technical and non-technical teams – German and other languages are a plus!

Why you should apply

Diverse and inclusive team: We are from 10+ different countries with diversity of both thought and background on a mission to disrupt the digital asset industry. We support each other and take pride in our achievements. We attract talents from companies like McKinsey, Credit Suisse, JP Morgan, Google, Moonfare, and N26.

Ownership & learning-curve: Opportunity to make an active contribution to the growth story of one of the leading disruptors in the FinTech industry.

Communication: We treat our staff like owners by being open, transparent, and providing regular communication about our direction and progress. We provide regular insights into decision making, strategy, and company-wide OKR progress so that each of our employees is aligned and empowered. We are also always aiming to improve how we can more effectively communicate.

Office: We offer both the flexibility to work remotely or to work in style and comfort from our modern office at Checkpoint Charlie, the heart of Berlin (at the moment, we all work from home).
