## Company Description

Finoa is a Berlin-based FinTech company founded in 2018 that provides custody and asset servicing solutions for digital assets tailored to institutional investors, HNWIs and corporates. It is one of the fastest-growing start-ups in the space, having emerged as the European leader in servicing hundreds of institutional and professional investors in the crypto space – with a global ambition. The business was founded by Henrik Gebbing and Christopher May, and they have built and continue to build a truly international and diverse team of extremely talented people (circa. 45 FTEs) in Europe's crypto capital. Finoa is backed by the most-renowned investors like Balderton Capital, Coparion, Venture Stars, and Signature Ventures.

## Job Description

We are looking for an experienced Test Automation Engineer to join our team.

As a Test Automation Engineer you will take full ownership of the quality of our Finoa banking system. Starting from the system and user requirements you are going to develop and execute automation scripts to confirm the quality of the code we develop.

## Role Description

- You are going to collaborate closely with Developers and the Product Team to understand the functionality and implement features that need to be tested and automated.
- You understand that test automation is key to a sustainable QA system in a growing environment and you are going to work hands-on in API testing.
- You are continuously looking for improvements in our test management, execution and reporting tools to keep up with Finoa's growth.
- You will develop scripts to run automated tests using postman.
- You will share QA status updates with the tech teams at daily meetings and take ownership in interlinking the test reports with the release requirements.
- You will organize and manage all phases of the software testing process.
- You will be responsible for writing documentation for processes, including test plans, test procedures, and test cases.

## Requirements

- Bachelor of Science (or Master) in Computer Science, Engineering, or a related field
- 3+ years of experience in an environment developing high-performance back-end systems, websites and cross-platform mobile apps.
- Strong hands-on experience with API test automation (with Postman or Katalon) is a must-have.
- Experience with SQL is strongly desired; working experience with GraphQL is a plus.
- Good understanding of advanced testing concepts like performance testing, scalability testing, security testing.
- Good understanding of test management, test automation reporting tools.
- You have an agile mindset and have a strong sense of ownership, flexibility and initiative.
- Excellent communication skills in English with the ability to communicate effectively with technical and non-technical teams – German and other languages are a plus!

## Why you should apply

**Diverse and inclusive team:** We are from 10+ different countries with diversity of both thought and background on a mission to disrupt the digital asset industry. We support each other and take pride in our achievements. We attract talents from companies like McKinsey, Credit Suisse, JP, Morgan, Google, Moonfare, and N26.

**Ownership & learning-curve:** Opportunity to make an active contribution to the growth story of one of the leading disruptors in the FinTech industry.

**Communication:** We treat our staff like owners by being open, transparent, and providing regular communication about our direction and progress. We provide regular insights into decision making, strategy, and company-wide OKR progress so that each of our employees is aligned and empowered. We are also always aiming to improve how we can more effectively communicate.

**Office:** We offer both the flexibility to work remotely or to work in style and comfort from our modern office at Checkpoint Charlie, the heart of Berlin (at the moment, we all work from home).
